

Color-Coded Cleaning System

Your Health is Our Priority

Office Pride is committed to effective cleaning practices to sanitize facilities and prevent the spread of germs. Our cleaning teams are trained in the use of our color-coded cleaning system.

Identifying a particular color of cleaning cloth or tool for a specific purpose increases hygiene by reducing the risk of cross contamination between restrooms and other areas such as desktops, break rooms, waiting rooms, exam rooms, play areas and offices.

Microfiber cloths are more efficient and durable than traditional cleaning cloth while providing bacteria resistance. These microfiber cleaning towels provide the best qualities for dusting and general use cleaning.

The towels are produced from microfiber split-fiber fabric containing an 80/20 blend with a 300 gsm specification. This is a terry type of fabric with a surface pile for grabbing and holding dirt and dust or for absorbing liquids.

Our system utilizes six color cloths:

Green

Damp Wipe and General Cleaning

Blue

Glass

Red

Toilets and Urinals

Yellow

Restroom Sinks and Counters

Gray

Stainless Steel

Brown

Wood and Furniture Polish
